

Left-Foot Accelerator

with electronic **AutoLock***

NEW
PRODUCT!

"Might be the best thing we've ever done."

Safety

Sure Grip's unique 15 second activation window only allows the accelerator to be activated for 15 seconds after vehicle start up. The accelerator will not engage after 15 seconds without a restart of the engine.

Installation

Sure Grip's new accelerator is permanently mounted, eliminating the need for removal of the device to prevent unwanted usage. The accelerator mounts from above, no longer requiring holes to be drilled in the floor of your client's vehicle. The OEM accelerator is manipulated via simple cable system.

Smart Design

The new Sure Grip Left Foot Accelerator is constructed from rugged plastics and aluminum allowing for a light weight device. The overall unit is dramatically reduced in size versus traditional removable accelerators, all part of the incredible smooth and sensitive pedal feel.

"The first client I exposed to Sure Grips new left foot accelerator loved it and purchased it. He was impressed by the look of the product, the ease of operation and the safety lockout feature. The pedal operation feels like the OEM pedal and the lack of a floor bracket adds space for taller clients. Activation is a push of the button, which will be a real advantage for hemiplegic clients who may have difficulty removing, and replacing floor mounted pedals with one hand or elderly clients who may not be able to bend down and reach under the dash."
